

FutureWall™ – Is a dynamic solution for almost any interior space. This flexible system is completely reusable and is the ultimate alternative to permanent walls.

Features:

FutureWall™ provides the freedom to design and create spaces of any scale. It is a suite of solutions for walls, cladding, doors, glazing and even freestanding pavilions.

Available materials and finishes:

- Veneers
- Laminates
- Glass
- Fabric
- Metal and even stone.

The system easily integrates components essential for the modern commercial space:

- Pin boards
- White boards
- Flat screen monitors
- Projection systems
- Shelves, storage units and desks.

Acoustic:

The desired acoustic levels can be achieved by modifying the density of the internal insulation or treating the wall panels to achieve the desired ratings. The standard configuration has been designed to achieve 39Rw and with enhancements can achieve 45+ Rw.

Environment:

All core components of the FutureWall™ System can be recycled or are made with recyclable materials. Our optional Take Back program ensures optimal reuse and recycling of your system at the end of your building tenancy or its useful life, greatly reducing materials used and overall embodied energy.

The system can offer low formaldehyde component materials that help improve indoor air quality. And because the system needs no glues, adhesives or paints, it significantly reduces overall VOC emissions.

Member of the Green Building Council of Australia

Certification:

- ISO 9001 Certified

Warranty:

- Up to 10 years
